

## zigi Cheat Sheet 2.0

The z/OS ISPF Git Interface that is bringing the world of Git to the z/OS Developers.

| Local Repositories Primary Commands |  |
|-------------------------------------|--|
| Command                             | Description                              |
| <a href="#">Clone</a>               | Make a local copy of a remote repository |
| <a href="#">Create</a>              | Create a local repository                |
| <a href="#">SSH</a>                 | View your SSH public key                 |
| <a href="#">Config</a>              | View/Update configuration settings       |
| <a href="#">Pro/Basic/Menu</a>      | Menu toggle                              |
| <a href="#">GITHelp</a>             | Interactive git help (man pages)         |
| <a href="#">Find</a>                | Find string in the table                 |
| <a href="#">Select</a>              | Select a repository                      |

| Local Repositories – Line Commands |  |
|------------------------------------|--|
| Command                            | Description                                |
| <a href="#">S</a>                  | Select a repository to work with (open it) |
| <a href="#">V</a>                  | View the repositories OMVS filesystem      |
| <a href="#">D</a>                  | Delete the local repository                |

| Current Repository – Primary Commands |   |
|---------------------------------------|---|
| Command                               | Description                                   |
| <a href="#">AddDsn</a>                | Add dataset or File to zigi management        |
| <a href="#">Branch</a>                | Change to, or Create a new, Branch            |
| <a href="#">Commit</a>                | Commit updates to git                         |
| <a href="#">Find</a>                  | Find string in the table                      |
| <a href="#">GITCmd</a>                | Git command dialog                            |
| <a href="#">GITHelp</a>               | Interactive git help (man pages)              |
| <a href="#">GITLog</a>                | Display the git log                           |
| <a href="#">Grep</a>                  | Find strings in git files                     |
| <a href="#">Merge</a>                 | Merge Branches                                |
| <a href="#">Network</a>               | Generate a Network Report                     |
| <a href="#">Pro/Basic/Menu</a>        | Menu toggle                                   |
| <a href="#">Pull</a>                  | Pull updates from the remote server           |
| <a href="#">Push</a>                  | Push committed updates to the remote server   |
| <a href="#">Refresh</a>               | Replace z/OS datasets with git OMVS files     |
| <a href="#">Remote</a>                | Add a remote server to the current repository |
| <a href="#">Rollback</a>              | Revert repository to a prior commit level     |
| <a href="#">Set</a>                   | Set zigi defaults                             |
| <a href="#">Snapshot</a>              | Make a non git managed copy of the repository |
| <a href="#">Status</a>                | Git Status                                    |
| <a href="#">View</a>                  | View the repositories OMVS filesystem         |

## zigi Cheat Sheet 2.0

| Current Repository – Line Commands |  |
|------------------------------------|--|
| Command                            | Description                                      |
| <b>A</b>                           | Add the dataset/file to the git index            |
| <b>B</b>                           | Browse the dataset/file                          |
| <b>E</b>                           | Edit the dataset/file                            |
| <b>D</b>                           | Show git detected differences (diff)             |
| <b>H</b>                           | Display commit history (source, commit, recover) |
| <b>RM</b>                          | Remove the dataset/file                          |
| <b>RN</b>                          | Rename the dataset/file                          |
| <b>U</b>                           | Undo an uncommitted change                       |
| <b>V</b>                           | View the dataset/file                            |

| PDS Member List - Primary Commands |                                  |
|------------------------------------|----------------------------------|
| Command                            | Description                      |
| <u><b>Commit</b></u>               | Commit updates to git            |
| <u><b>GITLog</b></u>               | View the git log                 |
| <u><b>Grep</b></u>                 | Find strings in git file         |
| <u><b>Locate</b></u>               | Locate a member in the table     |
| <u><b>Pro/Basic/Menu</b></u>       | Menu toggle                      |
| <u><b>Reset</b></u>                | Reset the ISPF Statistics Userid |
| <u><b>Sort</b></u>                 | Sort the columns                 |
| <u><b>Status</b></u>               | Git status                       |

| PDS Member List – Line Commands |  |
|---------------------------------|--|
| Command                         | Description                                      |
| <b>S</b>                        | Edit the member                                  |
| <b>A</b>                        | Add the updated member to git index              |
| <b>D</b>                        | Show git detected differences (diff)             |
| <b>H</b>                        | Display commit history (source, commit, recover) |
| <b>RM</b>                       | Remove the dataset/file                          |
| <b>RN</b>                       | Rename the dataset/file                          |
| <b>U</b>                        | Undo an uncommitted change                       |

| Comments  |  |
